

5500sc AMMONIA MONOCHLORAMINE ANALYZER

Applications

- Drinking Water

Chloramination made easy.

The Hach 5500sc Ammonia Monochloramine Analyzer provides all the information you need to eliminate nitrification events and taste and odor issues, giving you total confidence in your process. Oh—and it's easy, too.

Reliability without all the work

Only Hach can offer a low-maintenance solution with a pressurized reagent delivery system, easy-to-change reagent bottles, a simple troubleshooting menu, and PROGNOSYS predictive diagnostics. You'll always know if your analyzer is doing its job, so you can do yours.

Easy operation

It has never been easier to monitor your chloramination process online. You'll be up and running on day one with easy setup, and keep on running with at-a-glance status LEDs, a user friendly interface, color-coded reagent bottles and a simple solution for verifying your results with grab samples.

Improved control of your chloramination process

Continuous online monitoring gives you a more accurate and complete picture of your chloramination process, allowing you to make data-driven decisions. With a dual colorimeter design, you'll get more results faster - keeping you one step ahead of nitrification.

Principle of Operation

The analyzer measures total ammonia and monochloramine in drinking water and determines free ammonia concentration. The chemical analysis uses a modified phenate method to measure monochloramine values by colorimetry. An excess of hypochlorite at the correct pH generates total ammonia values measured by colorimetry. From these measurements, the analyzer calculates the free ammonia values for each measurement.
