

Bogalusa School Meru Wi-Fi Design

1.1. Coverage, Overlap and Performance

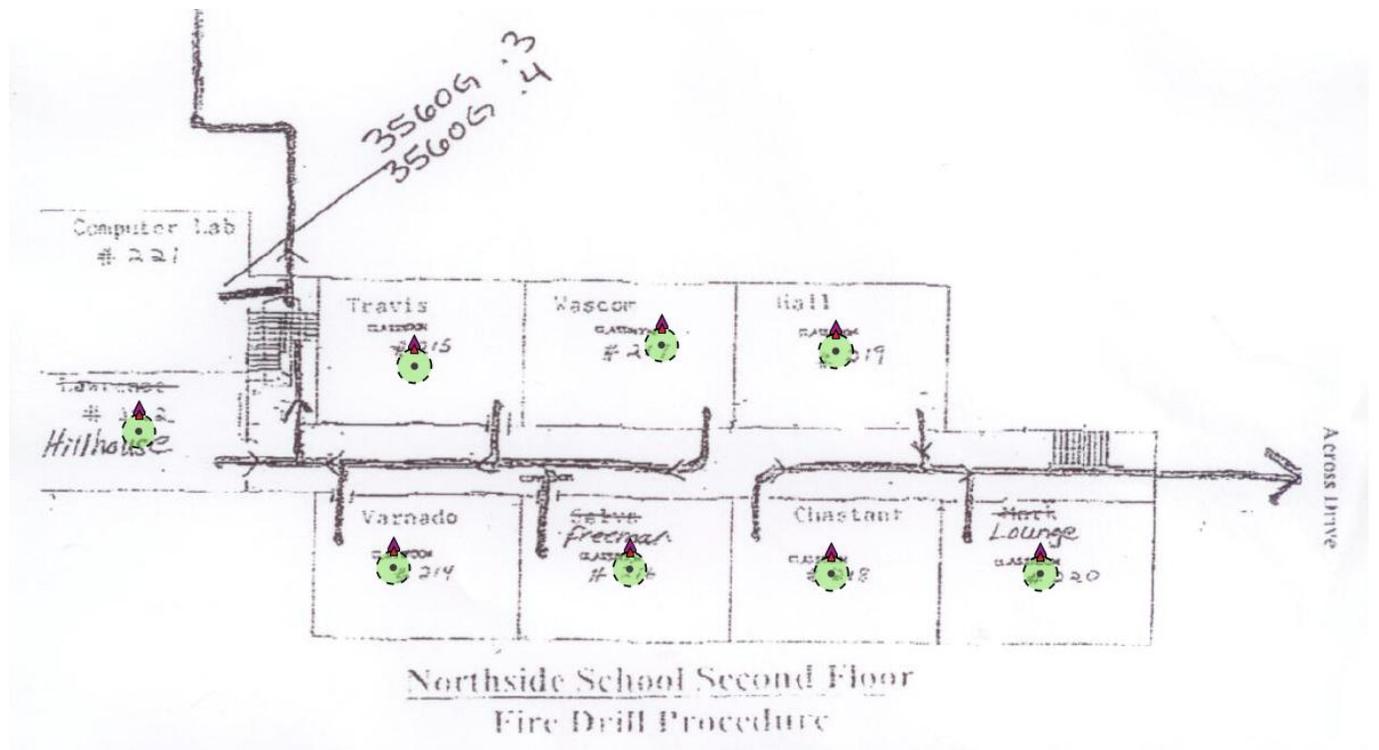

Signal Strength for Floor 1

Signal Strength - sometimes called coverage - is the most basic requirement for a wireless network. As a general guideline, low signal strength means unreliable connections, and low data throughput.

2. Floor 2

Survey routes and Access Points for Floor 2

2.1. Coverage, Overlap and Performance

Signal Strength for Floor 2

Signal Strength - sometimes called coverage - is the most basic requirement for a wireless network. As a general guideline, low signal strength means unreliable connections, and low data throughput.
