

## Cutting Costs and Improving Business Practices with Scanning and Archiving

Scanning and Archiving software can play a major role in helping hospitals to power their business. With MEDITECH's multidisciplinary solution, your organization will reap many benefits, such as:

- Point-of-access scanning in the Patient Accounts, Patient Registration and Billing department
- Electronic document management for legal chart assembly
- Optimizing coding and streamlining workflow in the HIM department
- Point-of-service scanning and Electronic Signature in the Clinical Ancillary departments.

### Explore the Benefits of the Electronic Legal Chart

Many hospitals today struggle with the superfluous costs associated with storage, retrieval, and maintenance of paper charts. MEDITECH's solution enables customers to maintain complete and permanent legal charts which replicate paper charts and are the source for easy chart replication. With the push of a button, users can output the electronic legal record by printing, faxing, or burning it to a CD—thus eliminating the manual process of having to track down a patient's paper chart. Auto-generated and efficient legal charts not only improve HIM workflow, but also ensure patient information is secure and protected.

"MEDITECH's Scanning and Archiving expedites chart output and eliminates the need to photocopy patient records," explains Product Specialist Lindsay McSharry. "No longer will customers need to pay costly storage and retrieval fees. In addition, they can rest assured their charts and documents will never get lost again."

### See It for Yourself at HIMSS

If you're planning to attend HIMSS, stop by our booth for more information on our Scanning and Archiving solution. MEDITECH's hardware partner Perot Systems will also be on-hand to address vital

success factors for both before and during implementation. Perot Systems will also provide cost savings advice for IT departments on how to keep costs down in a paperless environment.
