Re: Early Head Start Playground Safety Surfacing

Enclosed please find our proposal for the above referenced project. At this time, our pricing is a budgetary number and should be taken as such.

Please note that 4000sf is based on a 2" PIP thickness to accommodate a 4' maximum CFH and 1140sf is based on 2.50" PIP thickness to accommodate a 6' maximum CFH. We're thinking the one swing area may have an 8' fall height, which will need a 3.5" thickness. This is not included in our pricing. The use zone isn't quite 32ft across as the swings need to have 16ft on both sides. There are plastic borders, per Google Earth, and we have not allowed for extra thickness to be flush with the top of these borders. Please let us know if that will be a requirement for this project, or if it will be okay for our PIP elevation to be a couple of inches lower to provide a wheel chair stop.

Per specifications, 93 tons of aggregate base for a 4" depth was requested. However, the tonnage of compacted stone base for 5140sf is coming out to 118 tons, which is included in the quote. When mulch is present on a playground, the equipment is set to the 12" mulch height. Once the mulch is taken out, we must bring our rubber close to the original height of the mulch. In order to achieve this, we will need to have a minimum of 8" of stone, which would double the amount of stone needed for this project. The extra stone needed is not included in our pricing.

This is a budgetary number until we can get more information on the equipment and edge details. The pricing is based on a finished edge to the plastic border timber.

We thank you for the opportunity to work with you on this project! If there are any questions, please do not hesitate to contact us.

Sincerely,

Kristen George
