Removal and Disposal of Structures

OFFICE OF STATE AID ROAD CONSTRUCTION
MISSISSIPPI DEPARTMENT OF TRANSPORTATION

DATE: July 1, 2005

SUBJECT: Changes in Character of Work and Changed Physical Conditions and Removal and Disposal of Structures and Obstructions:

Section S-104 - SCOPE OF WORK; of the MISSISSIPPI STANDARD SPECIFICATIONS FOR STATE AID ROAD AND BRIDGE CONSTRUCTION 2004 EDITION is hereby amended as follows:

901-S-104.02.1--Changes in Character of the Work and Changed Physical Conditions: Delete the last sentence of the first paragraph and add the following paragraphs:

Upon written notification, the Engineer will investigate the conditions, and if it is determined that the conditions materially differ and cause an increase or decrease in the cost or time required for the performance of any work under the contract, an adjustment, excluding anticipated profits, will be made and the contract modified in writing accordingly. The Engineer will notify the Contractor, in writing, of the determination whether or not an adjustment of the contract is warranted.

No contract adjustment which results in a benefit to the contractor will be allowed unless the contractor has provided the required written notice.

In the second paragraph, after the words " cannot be reached," delete "the State Aid Engineer" and insert "the Board, with the approval of the State Engineer,". Then delete the words "which the State Aid Engineer has" and insert "which the Board and the State Aid Engineer have".

901-S-104.05--Removal and Disposal of Structures and Obstructions: After the last paragraph on page 1-27, add the following paragraph:

The Contractor shall also furnish the Engineer a certified letter stating that the area of disposal is not in a wetland.

901-S-104.06--Rights in and Use of Materials Found on the Work: After the first sentence of the third paragraph insert the following sentence:

The Contractor shall also furnish the Engineer a certified letter stating that the area of disposal is not in a wetland.

PROJECT NUMBER: LSBP-54(30)
COUNTY: Panola

GENERAL

A Small Construction General Permit is on file in the County Engineer's office. The Contractor should acquire a copy of the permit and the forms that accompany the permit. The Contractor is required to fill out these forms, have them on file, and be prepared to submit any of the forms required **ONLY** at the request of MDEQ.

SITE INFORMATION

The construction of the proposed bridge and approaches will disturb 1.20 acres. An unnamed creek that is a branch of the Tallahatchie River is draining north to south under the project road. The project is located in the Yazoo River Watershed Basin.

SEDIMENT AND EROSION CONTROL REQUIREMENTS

VEGETATIVE CONTROLS: Permanent erosion controls (soil preparation, fertilizing, seeding and mulching, sodding and matting) will be placed as shown on the plans. Any disturbed areas laid-up for over 30 days will be seeded (temporary or permanent seeding) within 7 days unless otherwise directed by the engineer at no additional cost to the project. (Other vegetative practices should be considered. For example, additional mulching, tree preservation, surface roughening, topsoiling, vegetative buffers and turf reinforcing mats.)

STRUCTURAL CONTROLS: Temporary silt fence, hay bales, detention ponds and riprap will be placed as shown on the plans. (Other structural controls should be considered. For example, check dams, diversions, inlet protection and slope drains. Appropriate standard drawings and details should be included in the plans. Reference to MDEQ publications and best management practices are recommended to discuss where these practices apply, correct installation and maintenance of these practices.)

HOUSEKEEPING PRACTICES: The contractor is reminded of his responsibilities as outlined in Section 107 of the Specifications which include equipment maintenance and repair, concrete chute wash off, trash/debris, storage of chemicals and other toxic materials, and sanitary facilities. Storm water pollution prevention best management practice techniques are to be applied throughout the construction of this project, the cost of which is to be included in regular bid items.

POST CONSTRUCTION CONTROL MEASURES: Upon completion of construction, vegetative growth along the roadway foreslopes will provide a

buffer zone for loose material originating from the roadway. Ditch diversions reduce flow and velocity along the project. Vegetative growth on the backslopes will provide a buffer zone for loose material originating beyond the backslope. Flatter grades and ditch treatments minimize erosion. Riprap ditches shown on the plans dissipate energy and reduce flow velocity. Paved ditches and flumes along with rock outlets are required. (The permit requires that post construction control measures be addressed. See Chapter 5 of the MDEQ Planning and Design Manual for additional permanent practices.)

IMPLEMENTATION SEQUENCE

Temporary silt fence will be installed before construction operations begin along the creek and at all cross drains. The rest of the silt fence, hay bales and detention ponds will be installed immediately after clearing and grubbing. Permanent erosion control measures should be placed as construction progresses and no later than 7 days after substantial completion of grade and drain operations.

MAINTENANCE PLAN

The contractor and engineer will inspect all disturbed areas, erosion and sediment controls after each significant rainfall but not less than once per week and record the results of this inspection on the "Monthly Inspection Report and Certification Form for Erosion and Sediment Controls" included with the permit. The monthly inspection reports and this SWPPP will be available for inspection during construction, and submitted to MDEQ with the Notice of Termination as required. The contractor shall make needed repairs to installed erosion control items weekly and after each significant rainfall as necessary. This includes, but is not limited to, removing sediment, repairing, reinstalling, or replacing silt fence, hay bales, or other temporary erosion control measures, repairing washes, ditches, or other permanent erosion control devices.
