Proposal for Imaging Equipment for Temporary Modular Acute Care Hospital Facility

Southern Medical Imaging Consultants (SMIC) is honored to present a bid for imaging equipment requested for a Temporary Modular Acute Care Hospital Facility located at 5360 W. Creole, Louisiana, 70631. SMIC intends to offer an option for a CT housed in a lead-lined trailer that complies with all Louisiana laws and statutes, including but not limited to Centers for Medicare and Medicaid Services building codes. All systems comply with the specifications of the bid.

SMIC will also offer two options for x-ray equipment, which will comply with all Louisiana laws and statutes, including but not limited to Centers for Medicare and Medicaid Services building codes. The second option for an x-ray is due to the possibility of the height of the ceiling being only eight (8) feet. Most systems on the market require nine (9) feet from ceiling to floor. Both systems comply with the specifications of the bid.

The portable x-ray equipment offered will have an option for a mounted computer on the x-ray mast and an option for a laptop or tablet.

The attached proposal will show SMIC's experience with medical imaging, as well as the expertise of our engineers and the proximity of service engineers to Creole, Louisiana, for prompt service.

Thank you for the opportunity to participate in this RFP.
